More than Cooling

In Vestfrost appliances we care not only about the **safety** of stored products but also **your health**, **comfort** of use and your home budget. All solutions have been included in a minimalistic, modern design.

Technology is based on a special module with a UV-C LED diode and a carbon filter located in the upper part of the refrigerator. The carbon filter neutralizes unpleasant odors. The UV-C LED diode eliminates 99.9% of bacteria, viruses and fungi in the air passing through the filter.

Cooling technology that allows even and simultaneous chilling and freezing of food; the air does not penetrate between the chambers, thus preventing smells from the fridge and freezer from mixing.

The Maxi Fresh filter eliminates the ethylene released from plants during their growth process, increasing shelf life of food.

MetalCooling

The metal element on the rear wall of the fridge compartment helps to maintain the temperature, improves its stability and ensures a faster return to the fridge set-point temperature after the door is opened.

In consequence the energy is saved.
